2. Detailed AQR Results

D. Matrix Breakdown of AQR Result (B2)

Note:

• **The selection of asset classes for portfolio review was based on an approach aimed at identifying those portfolios with the highest risk of misclassification. Therefore, extrapolation of results to the non-selected portfolios would be incorrect from a statistical stand-point.**
• The columns D. C to D .F include (but are not limited to) any impacts on provisioning associated with the reclassification of performing to non-performing exposure.
• In the AQR exercise the resulting increase in provisions (from a supervisory perspective) are translated into a change in CET1.
• Items D1 to D21 are before offsetting impacts such as asset protection and taxes.
• Basis points are calculated using total risk exposure from Section A4
• For the interpretation of the detailed results the interested reader may refer to the AQR manual outlining the methodology or to the accompanying Aggregate Report where the main features of the CA exercise are reiterated. Find the AQR manual here:

E. Matrix Breakdown of Asset Quality Indicators

• The selection of asset classes for portfolio review was based on an approach aimed at identifying those portfolios with the highest risk of misclassification. Therefore, extrapolation of results to the non-selected portfolios would be incorrect from a statistical stand-point.

• The asset quality indicators are based on EBA's simplified definition of NPE.

• All parties involved made significant efforts to increase the degree of harmonisation of the NPE definition and its application.

• While the application of this definition constitutes a very important leap forward in terms of harmonisation across the euro area banking sector, the degree of harmonisation reached is not completely perfect due to factors such as different materiality thresholds across Member States. However, a solid basis of consistency has been implemented for the comprehensive assessment, implying a very significant improvement in comparability across banks from different jurisdictions.

• The figures presented should not be understood as accounting figures.

The only exception to national transitional arrangements is sovereign AFS losses (Article 467 CRR) where a harmonised approach is taken with a 20% deduction irrespective of national discretion concerning phase-in. This exception is necessary to be consistent with EBA's CET1 definition applied in the stress test exercise. This includes losses of 2013 or retained earnings of 2013 subject to Article 26.2 CRR.
A4	Total risk exposure	Article 92.3 CRR, "total RWA", as of year-end 2013. according to CRDIV/CRR definition, transitional arrangements as of 1.1.2014.
